### Product Overview

Intel is proud to announce its 6th generation Intel® Core™ processor family. Manufactured on the latest 14 nm technology, these processors offer dramatically higher CPU and graphics performance compared to the previous generation, a broad range of power options, and new advanced features to boost edge-to-cloud Internet of Things (IoT) designs.

The 6th generation Intel Core processor family also maintains a standardized thermal envelope for 45W (cTDP 35W), 35W, and 25W, remaining consistent with the previous processor generation. The new generation is ideal for a wide range of IoT applications, including retail transaction terminals, digital signage, military and aerospace systems, casino gaming, and industrial automation.

### Stunning Visual Performance

The 6th generation Intel Core processors utilize the new Gen9 graphics engine, which improves graphic performance by up to 22 percent.<sup>1</sup> The improvements are demonstrated through faster 3-D graphics performance and rendering applications at low power. Video playback is also faster and smoother, thanks to the new multiplane overlay

capability. The new generation offers up to three independent audio streams and displays—without the need for a discrete graphics card—as well as Ultra HD 4K support and workload consolidation for lower BOM costs and energy output.

Users will also enjoy enhanced high-density streaming applications and optimized 4K videoconferencing with accelerated 4K hardware media codecs HEVC (8-bit), VP8, VP9, and VDENC encoding, decoding, and transcoding. Together, the stunning visual performance enhancements add up to more immersive computing experiences.

### Power-Efficient Performance

The new 6th gen Intel Core processors make a powerful difference on the efficiency front as well. The improved technology promises up to 26 percent faster CPU<sup>2</sup> and up to 22 percent faster graphics<sup>1</sup>—all at the same or similar thermal design power (TDP) as the prior generation.<sup>3</sup> Develop more flexible designs with up to 40 percent more high-speed I/O than previous generations and tap into new, faster memory performance with new memory support for DDR4 1.2V up to 2133, 64GB max capacity with 8GB density.

The 6th gen Intel® Core™ i7 and Intel® Core™ i5 processors come with Intel® Turbo Boost Technology<sup>4</sup> 2.0 for that extra burst of performance and Intel® Hyper-Threading Technology<sup>5</sup> (only on Intel Core i7 processors) so each processor core can work on two tasks simultaneously. Other important features include Intel® Advanced Vector Extensions 2 (Intel® AVX2), which provides optimized instructions to drive enhanced performance on floating point-intensive apps,<sup>6</sup> and Intel® Ready Mode Technology<sup>7</sup> for PCIe\* storage for improved data reliability and greater levels of performance, responsiveness, and expandability.

**Broad Design Range**

In addition to stunning visuals and efficient performance, the 6th generation Intel Core processor offers a broad product line with multiple operating system (OS) choices that

scale from dynamic new tablets, to low-power systems requiring greater productivity and graphics, to sleek, high-performance products.

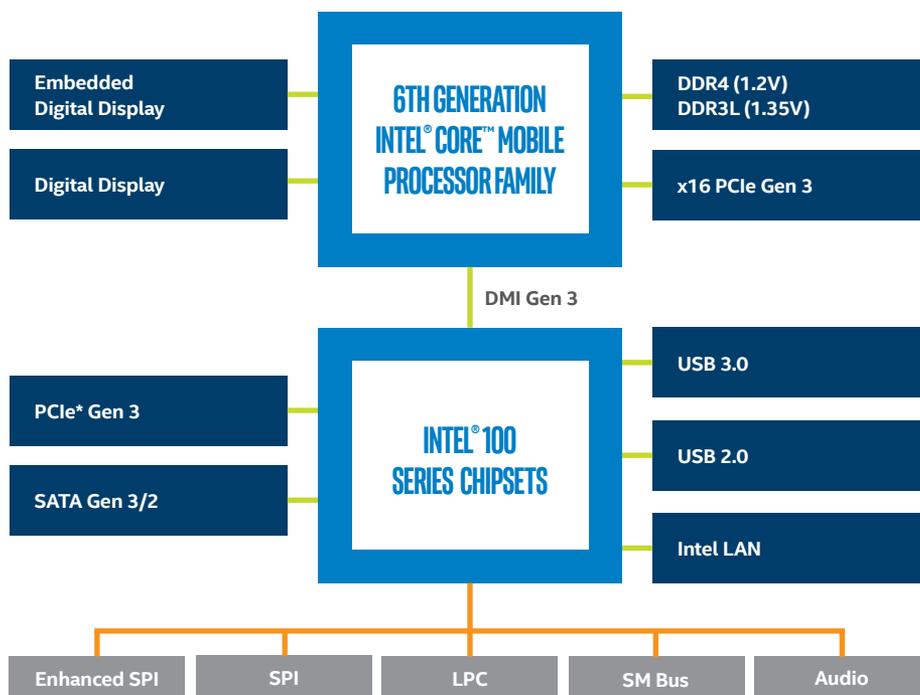

Operating system support ranges from small footprint real-time operating systems (RTOSs) to feature-rich OSs to optimize choice, flexibility, and OS investment protection. Thermal design power (TDP) options are available as well, ranging from 25W to 45W to fit most thermal designs, from performance to low power.

The new 6th generation Intel Core processors enable more flexible designs with configurable I/O, offering additional high-speed ports compared to the previous generation. More high-speed input/output (HSIO) means improved flexibility increasing to 22 total HSIO ports,<sup>8</sup> including 16 PCIe 3.0 ports,<sup>8</sup> up to eight USB 3.0 ports,<sup>8</sup> and up to four SATA (6 Gbps).

**Advanced Security and Manageability**

New 6th generation Intel Core processors protect IoT systems and data at rest and in flight through hardware- and software-based security hardening. Keep increasingly connected devices more secure and enhance the firmware trusted platform module (TPM) with Intel® Platform Trust Technology (Intel® PTT), Intel® Software Guard Extensions (Intel® SGX) to protect data while in use, Intel® Memory Protection Extensions (Intel® MPX) to protect memory from buffer-overload attacks, and Intel® Boot Guard to securely boot machines.

Intel® vPro™ technology<sup>9</sup> is enabled when select processor SKUs are paired with the right chipset. These platforms deliver intelligent security, supporting operating system-absent manageability, and down-the-wire security even when the system is powered off, the operating system is unresponsive, or software agents are disabled.
